YABA COLLEGE OF TECHNOLOGY
SCHOOL OF TECHNOLOGY

REPORT ON:

STUDENTS' INDUSTRIAL WORK-EXPERIENCE SCHEME **(SIWES)**

UNDERTAKEN AT:

YABATECH DIGITAL TECHNOLOGOY ACADEMY (YDTA)

FIRST FLORR ZENITH BANK BUILDING, YABA COLLEGE OF TECHNOLOGY, YABA LAGOS.

FROM 7TH APRIL 2025 TO 17TH JULY 2025

BY:

YAQEEN MUBARAK OPEYEMI

F\ND\23\3210102

PLACEMENT NUMBER:

810

SUBMITTED TO:

THE DEPARTMENT OF COMPUTER SCIENCE

SCHOOL OF TECHNOLOGY

YABA COLLEGE OF TECHNOLOGY, YABA LAGOS.

CERTIFICATION

This is to certify that the student with the name **YAQEEN MUBARAK OPEYEMI** with matriculation number **F/ND/23/3210102** of the Department of **COMPUTER SCIENCE, SCHOOL OF TECHNOLOGY, YABA COLLEGE OF TECHNOLOGY** has successfully completed the **Students' Industrial Work Experience Scheme (SIWES)** at **YABATECH DIGITAL TECHNOLOGY ACADEMY (YDTA).**

YAQEEN MUBARAK OPEYEMI

DEDICATION

I dedicate this work first and foremost to **Almighty Allah**, the Most Gracious, the Most Merciful, for granting me life, strength, and the opportunity to begin and complete this journey. His guidance, protection, and blessings have sustained me through every challenge, every moment of doubt, and every step forward. Without His divine favor, none of this would have been possible.

To my **beloved parents**, your love, prayers, sacrifices, and unwavering support have been the foundation upon which my growth stands. From the very beginning, you believed in me, even when I didn't fully believe in myself. Your words of encouragement, your patience, and the values you instilled in me have carried me through difficult times. I can never truly repay all that you've done, but I hope this is a reflection of your endless investment in me.

To my **wonderful siblings,** thank you for being my closest companions in life. I cherish the bond we share and hold each of you in the highest esteem. You inspire me in more ways than you know.

AKNOWLEDGEMENT

Firstly, all thanks to **Almighty Allah** who in his infinite mercy preserved me till this moment. Also from his blessings upon me is that he made me complete this internship journey successfully.

My deepest appreciation goes to my mum and dad, whose support, prayers, and belief in me gave me the push I needed, even on the tough days. Their sacrifices are the reason I keep striving.

I sincerely thank the management **YABA COLLEGE OF TECHNOLOGY** and the **federal government of Nigeria** for the **digital skills hub initiative,** which gave me an opportunity to get a hand on experience training and entire team at **YDTA** for giving me the opportunity to learn, grow, and contribute. The experience was fast-paced and challenging, but it stretched me in the best way possible. Special thanks to **MR ADEBAYO**, my SIWES supervisor, for his guidance and feedback, through the journey.

To my school **YABA COLLEGE OF TECHNOLOGY** and the **SIWES unit** thank you for coordinating the program and making sure students like me get exposed to real-world experience.

I wouldn't forget Mr. Ahmad Balogun my skill instructor at **YDTA,** who from his zeal to see us learn and succeed poured out his knowledge to his best capability

Lastly, to my siblings, friends, my brothers in faith and everyone who supported me with encouragement, advice, or just checked in while I was figuring things out, thank you all.

ABSTRACT

This report documents my journey through a 3-month internship program at YABATECH Digital Technology Academy (YDTA), where I trained as a UI/UX designer. From April to July 2025, I explored the end-to-end process of creating intuitive, user-centered digital interfaces. I worked on mobile apps, redesigned web pages, participated in research sessions. This document outlines what I learned, the tools I used (like Figma, Figjam, behance and google docs), the challenges I faced, and the personal growth I experienced as a student designer transitioning into the real world of tech. YABATECH Digital Technology Academy (YDTA) is a tech-focused training center committed to teaching future-ready digital skills.

CHAPTER ONE

BACKGROUND

Student Industrial Work Experience Scheme was established by the Industrial training Fund (ITF) in 1973 with the aim of bridging the gap between the skills which the labour market required with that ofthose acquired by the graduate students.

Since its introduction by the ITF in 1973 the Scheme has gone through series of reforms. its management, for instance, has changed hands from the ITF to the various regulatory AGENCIES SUCH AS National Universities Commission (NUC) National board for Technical Education (NBTE) and National Commission for college of Education (NCCE) and now back to the ITF again. These are the major stakeholders in (SIWES).

Consequently, SIWES Programme was introduced into the curriculum of tertiary institutions in the country as far back as 1974 with 748 students from 11 institutions of higher learning.

However, the scheme has over the years contributed immensely to the personal development and motivation of students to be able to understand the important connection between the taught and learnt content of their academic programmes and what knowledge and skill will be expected of them on professional practice after graduation.

Meanwhile, the need for students to possess adequate information on (SIWES) is further underlined by the fact that (SIWES) is a course of study that attract two, four and six credit units in Colleges of Education, Polytechnics and Universities respectively, depending on the need attached to it by the institutions.

The availability of required information therefore, enhances the capacity of students to work for and earn the credit units allotted for SIWES, rather than wobbling through the training intervention because of lack of pertinent information.

OBJECTIVES OF SIWES

The Industrial training funds policy document no. 1 of 1973, which established SIWES outline the objectives of the scheme.
The objectives are to:

1. Provide an avenue for students in institution of higher learning to acquire industrial skills and experience during their course of study.
2. Prepare students for industrial work situation that they are likely to meet after graduation.
3. Expose students to work methods and techniques in handling equipment and machinery that may not be available in their institutions.
4. Make the transition from school to the world of work carrier and enhances students contacts for later job placements.
5. Provide students with the opportunities to apply their educational knowledge in real work situations, thereby bridging the gap between theory and practical.

OBJECTIVES OF THE REPORT

- To fulfill one of the academic requirements for the award of the National Diploma (ND) in Computer Science.
- To document and reflect on the practical experiences and activities carried out during the four-month SIWES (Student Industrial Work Experience Scheme) training.
- To bridge the gap between theoretical knowledge acquired in the classroom and its real-world application in the industrial sector.
- To contribute meaningfully to the existing body of knowledge by highlighting relevant industry practices and skill acquisition.

CHAPTER TWO

DESCRIPTION OF ESTABLISHMENT

The **YABATECH Digital Technology Academy (YDTA)** is a forward-thinking, tech-focused training institution established to equip students with in-demand, future-ready digital skills. Positioned as a bridge between academic learning and the evolving digital landscape, YDTA offers an immersive environment where learners are prepared to thrive in the competitive tech industry.

The academy provides intensive, hands-on training programs in various digital fields, including:

- **UI/UX Design**
- **Mobile Application Design**
- **Software Development**
- **Graphic Design**
- **Web Application Design**
- **Data Analytics**

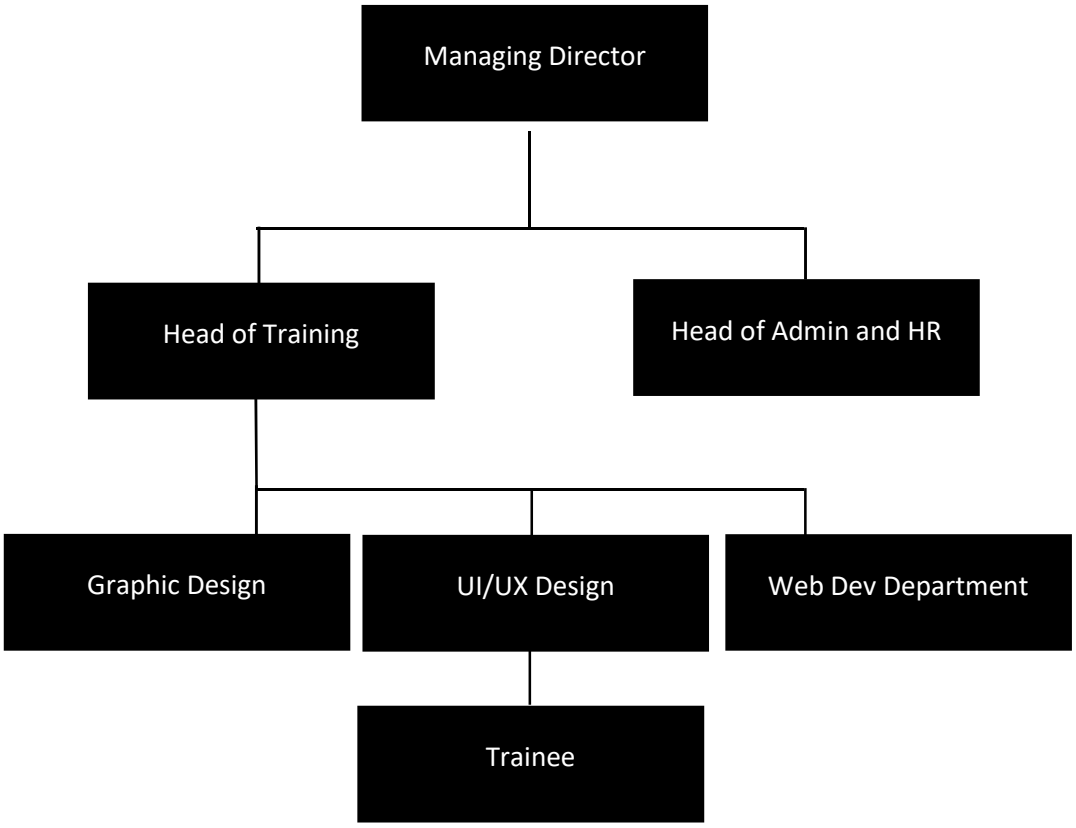
Each program is carefully structured to ensure students not only understand the theoretical foundations but also gain practical, real-world experience. Learners are mentored by seasoned industry professionals and exposed to modern tools, industry-standard practices, and real-life projects that mirror actual workplace scenarios.

YDTA is not just a training center—it is a growth hub where creativity, problem-solving, collaboration, and innovation are continuously nurtured. By simulating real industry environments, the academy prepares students to transition seamlessly into the workforce, either as employable professionals or as self-driven entrepreneurs.

Overall, YDTA plays a vital role in closing the skill gap between classroom education and industry expectations, making it a valuable contributor to the development of Nigeria's digital economy.

Location: First floor, Zenith building, Yaba College of Technology, Yaba Lagos.

ORGANIZATIONAL ORGANOGRAM



DEPARTMENTS AT YDTA

1. **Managing Director** — The Managing Director oversees the affairs of the digital academy, ensuring smooth onboarding, logistics, and attendance tracking
2. **Head of Training** — The head of training oversees and manages the trainers and trainees
3. **Graphic Design** — This department focuses training trainees on using design software like coreldraw, adobe illustrator and photoshop for functional designs
4. **UI/UX Design** — Focuses on training trainees on product and design thinking. Using tools like figma, figjam, behance and google docs.

Web Development — Focuses on training trainees on creating dynamic websites using HTML, CSS and JAVASCRIPT

CHAPTER THREE

MY TRAINING PROGRAM EXPERIENCE

1. UX Foundations

During the initial weeks of the training, we were introduced to the foundational principles of User Experience (UX) and the distinctions between UI (User Interface) and UX design. This phase was focused on building empathy for users and understanding their needs, behaviors, and pain points. We learned how to create empathy maps and user personas, which helped us visualize different user types and design solutions tailored to them. Additionally, we explored how to translate user insights into basic design ideas through simple wireframes. These wireframes laid the groundwork for structuring user interfaces before diving into more detailed visuals. Tools such as FigJam were extensively used for collaborative brainstorming, while Google Docs supported our documentation and ideation processes throughout this stage.

2. Structure & Flow

As the training progressed, we delved deeper into designing the structure and flow of digital products. We began by building user flows that mapped out how users would navigate through an app or website to achieve specific goals. This process sharpened our ability to think from the user's perspective and to structure intuitive paths through digital interfaces. We then developed low-fidelity wireframes, which served as skeletal layouts of screens without visual styling, focusing on layout, content placement, and functionality. This stage marked our formal introduction to Figma, a powerful design tool we began using to create and share design drafts collaboratively. Alongside Figma, Google Docs remained useful for writing explanatory notes and tracking feedback from instructors and team members.

3. High-Fidelity UI

In this stage, we transitioned from rough layouts to polished visual interfaces by creating high-fidelity UI designs for both mobile and web platforms. We learned the importance of consistency, accessibility, and responsive design, ensuring that our user interfaces adapted seamlessly across different screen sizes and devices. A key focus was placed on building reusable components, such as buttons, forms, and navigation elements, which helped us design efficiently and maintain consistency throughout our projects. We also created style guides that documented our design systems—defining colors, typography, icon usage, and spacing rules—to ensure scalability and clarity

in design communication. These practices prepared us to work in more professional, development-ready formats and enhanced our ability to build visually appealing and functional interfaces.

4. **Testing & Documentation**

In the final phase of the training, we explored the importance of user testing and iterative design. We conducted usability testing sessions to evaluate how real users interacted with our designs, observing their behavior, identifying pain points, and collecting feedback to improve the user experience. Based on the insights gained, we revised and refined our designs to address user concerns and enhance overall functionality. This stage emphasized that design is not a one-time effort but a continuous process of improvement. We also learned how to properly document our design process and outcomes in the form of case studies, which not only showcase our work but also reflect our problem-solving approach and design thinking. Figma was used to adjust and present the revised designs, while Google Forms and other tools facilitated the testing and feedback collection process.

SKILLS I GAINED

- **Technical Skills**

Throughout the training, I gained hands-on experience with Figma, using it extensively to design user interfaces, build reusable components, and create interactive prototypes. I also engaged in UX research, learning how to gather user insights through surveys and feedback sessions to inform design decisions. Emphasis was placed on mobile-first and responsive design, ensuring interfaces adapted smoothly across devices. Additionally, I improved my ability to create professional UI presentations and mockups, effectively showcasing design ideas to mentors and peers.

- **Soft Skills**

Beyond technical knowledge, the training greatly enhanced my soft skills, particularly in communication and storytelling, which were crucial when presenting design concepts and explaining user flows. I developed stronger problem-solving abilities by approaching design challenges with a user-first mindset. The regular exchange of critiques helped me grow in giving and receiving constructive feedback, while working on projects under time constraints taught me focus and patience. Most importantly, I deepened my critical thinking and learned to make thoughtful, user-centered decisions.

- **Workplace Habits**

The structured nature of the training encouraged the development of strong workplace habits. I kept track of my daily tasks, helping me stay accountable and organized. I followed a systematic design workflow, which improved my efficiency and clarity in executing projects. Regular team

exercises promoted peer collaboration, allowing me to work effectively with others. Lastly, I honed my time management skills, balancing multiple assignments and ensuring deadlines were consistently met.

CHAPTER FOUR

SUMMARY OF EXPERIENCE

The Student Industrial Work Experience Scheme (SIWES) at YABATECH Digital Technology Academy (YDTA) was a truly enriching and eye-opening experience. Over the course of four months, I had the opportunity to immerse myself in the world of UI/UX design — a field I had only encountered theoretically prior to this training. The program allowed me to move beyond the classroom and engage with real-life digital design problems, using industry-standard tools like Figma, FigJam, and Google Workspace.

Through a combination of mentorship, project-based learning, peer collaboration, and feedback sessions, I gained a clearer understanding of what it means to design for users. I am especially grateful for the space to grow as a beginner — from sketching wireframes to building working prototypes and presenting them confidently. The hands-on approach of the academy made learning engaging and practical, and helped me see how the skills I've learned can be applied in the real world. Most importantly, it helped me build confidence, purpose, and a clear direction in my career path.

CONCLUSION

This training was more than just a requirement for my National Diploma — it was a personal breakthrough. I entered the program unsure of what to expect, but I leave it with a new mindset and skillset. I now understand what it means to think like a designer: to empathize with users, to solve problems creatively, and to communicate ideas with clarity. From creating my first working prototype to participating in final presentations, every stage of the journey helped me grow.

I am proud of what I was able to accomplish during this short period — not just the designs I created, but the growth I experienced in critical thinking, teamwork, and digital craftsmanship. The exposure to real-world tools and processes gave me a glimpse of what working in the tech industry truly looks like, and I feel much more prepared and motivated to take the next step in my career.

RECOMMENDATIONS

To help future SIWES interns make the most of their experience, I offer the following recommendations based on what I've learned:

- Choose a training center that prioritizes growth over routine. Look for places like YDTA where you are challenged, mentored, and exposed to real-life tasks, not just taught theory.
- Stay curious and consistent. Don't be afraid to ask questions, try new tools, or make mistakes — it's all part of the process. Consistency in practice is what truly builds skill.
- Work on real problems, not just assignments. Approach every project with the mindset of solving user needs. This will help you build meaningful case studies that can be added to your portfolio.
- Start documenting your work from the beginning. Build your case studies step by step — from problem definition to user research, sketches, testing, and final presentation. This will not only make your report easier but also prepare you for job opportunities down the line.
- Manage your energy wisely. It's easy to burn out during intense projects. Learn to take breaks, pace your work, and focus on quality rather than rushing to finish.

CHALLENGES

- **Internet Disruptions with Cloud Tools:**
  Working with cloud-based platforms like Figma and Google Docs required a stable internet connection, which was not always reliable. These interruptions occasionally delayed collaboration, project updates, and testing processes.
- **Overcoming the Learning Curve in Figma:**
  As a beginner, mastering Figma's vast features — from auto layout to component building and prototyping — was initially overwhelming. It took consistent practice, exploration, and guided help to become comfortable with the tool.
- **Mental Fatigue During Long Projects:**
  Extended design sessions, especially when working on complex projects or meeting deadlines, sometimes led to mental exhaustion. Maintaining focus and creativity over long periods was a challenge that required better time and energy management.
- **Balancing Feedback with Execution:**
  Receiving feedback from mentors and peers was valuable, but integrating

multiple suggestions while keeping the design focused and user-centered proved challenging at times, especially when working under pressure.

- **Adapting to a Fast-Paced Learning Environment:**
  The rapid nature of the training required quick adaptation to new concepts and tools. Balancing speed with understanding was essential, and it sometimes felt like there wasn't enough time to fully absorb everything before moving on.
